

iOS Introduction

2.3.11 Monospace Font Styles

Purpose

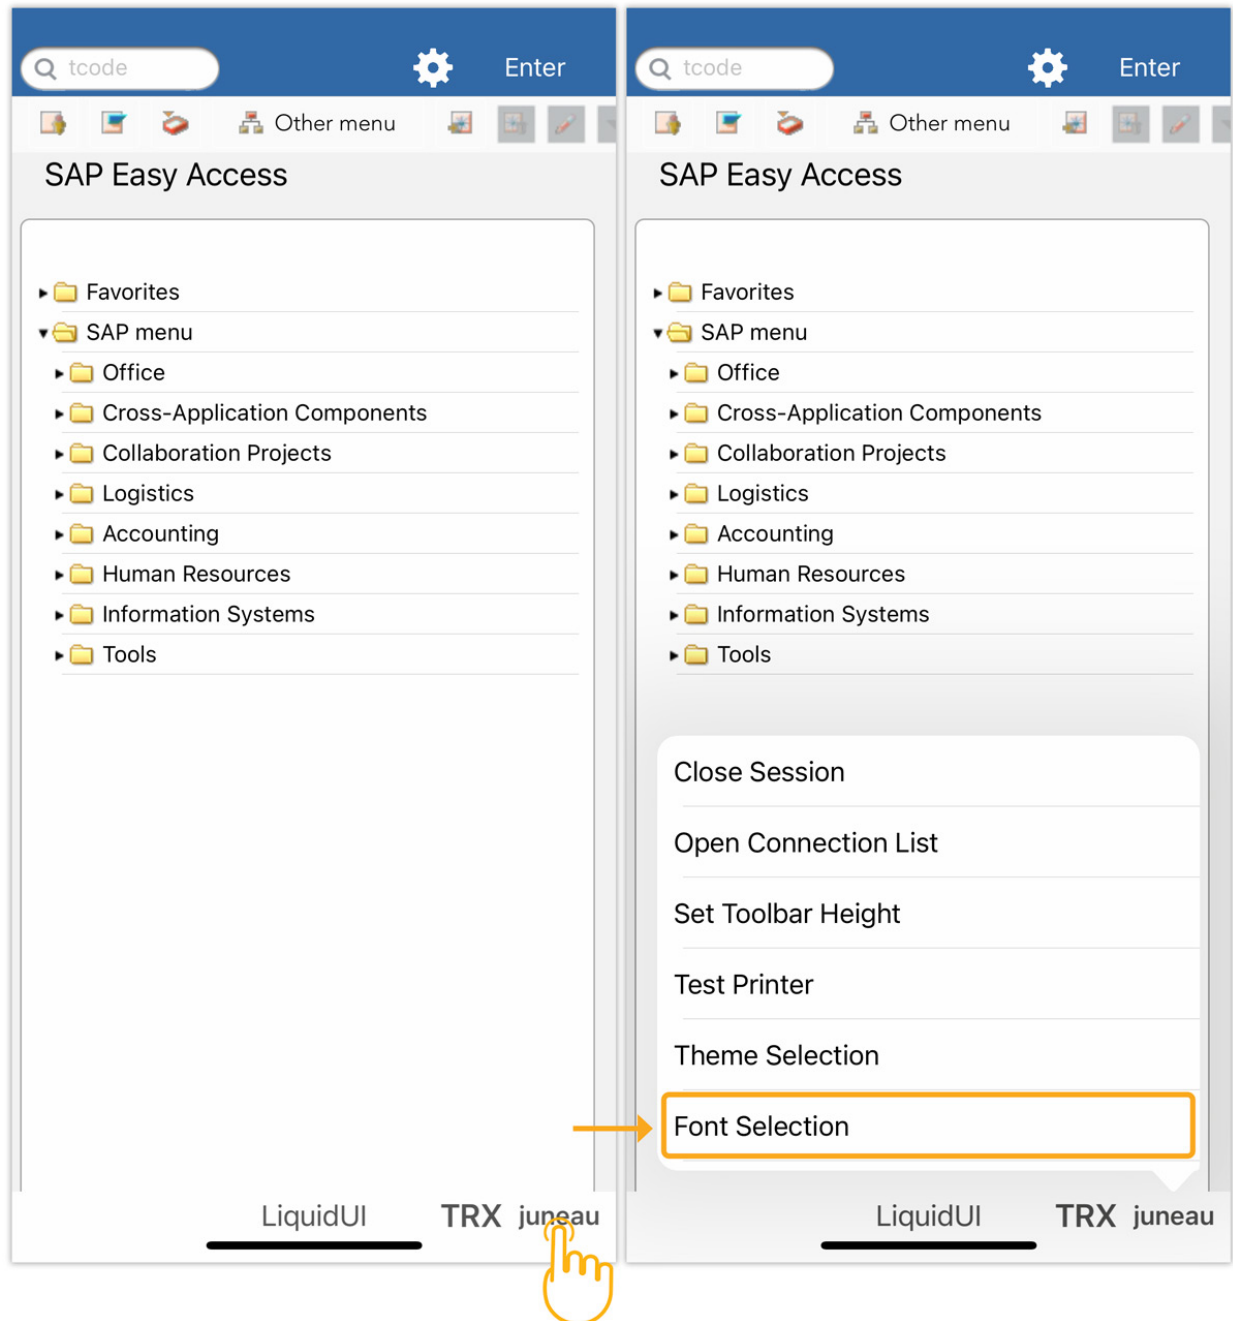

Liquid UI for iOS supports monospaced font styles on screen, enhancing clarity and readability. Monospaced fonts, also known as fixed-pitch, fixed-width, or non-proportional fonts, allocate the same amount of horizontal space to each letter and character. This uniformity contrasts with variable-width fonts, where letters and spacing vary in width.

Liquid UI for iOS offers a wide selection of monospace font styles, including Default, Anonymous Pro, Bitstream Vera Sans Mono, Code New Roman, Droid Sans Mono, Inconsolata, Liberation Mono, Source Code Pro, and Ubuntu Mono.

To change the **Monospace font** styles in Liquid UI for iOS, follow these steps.

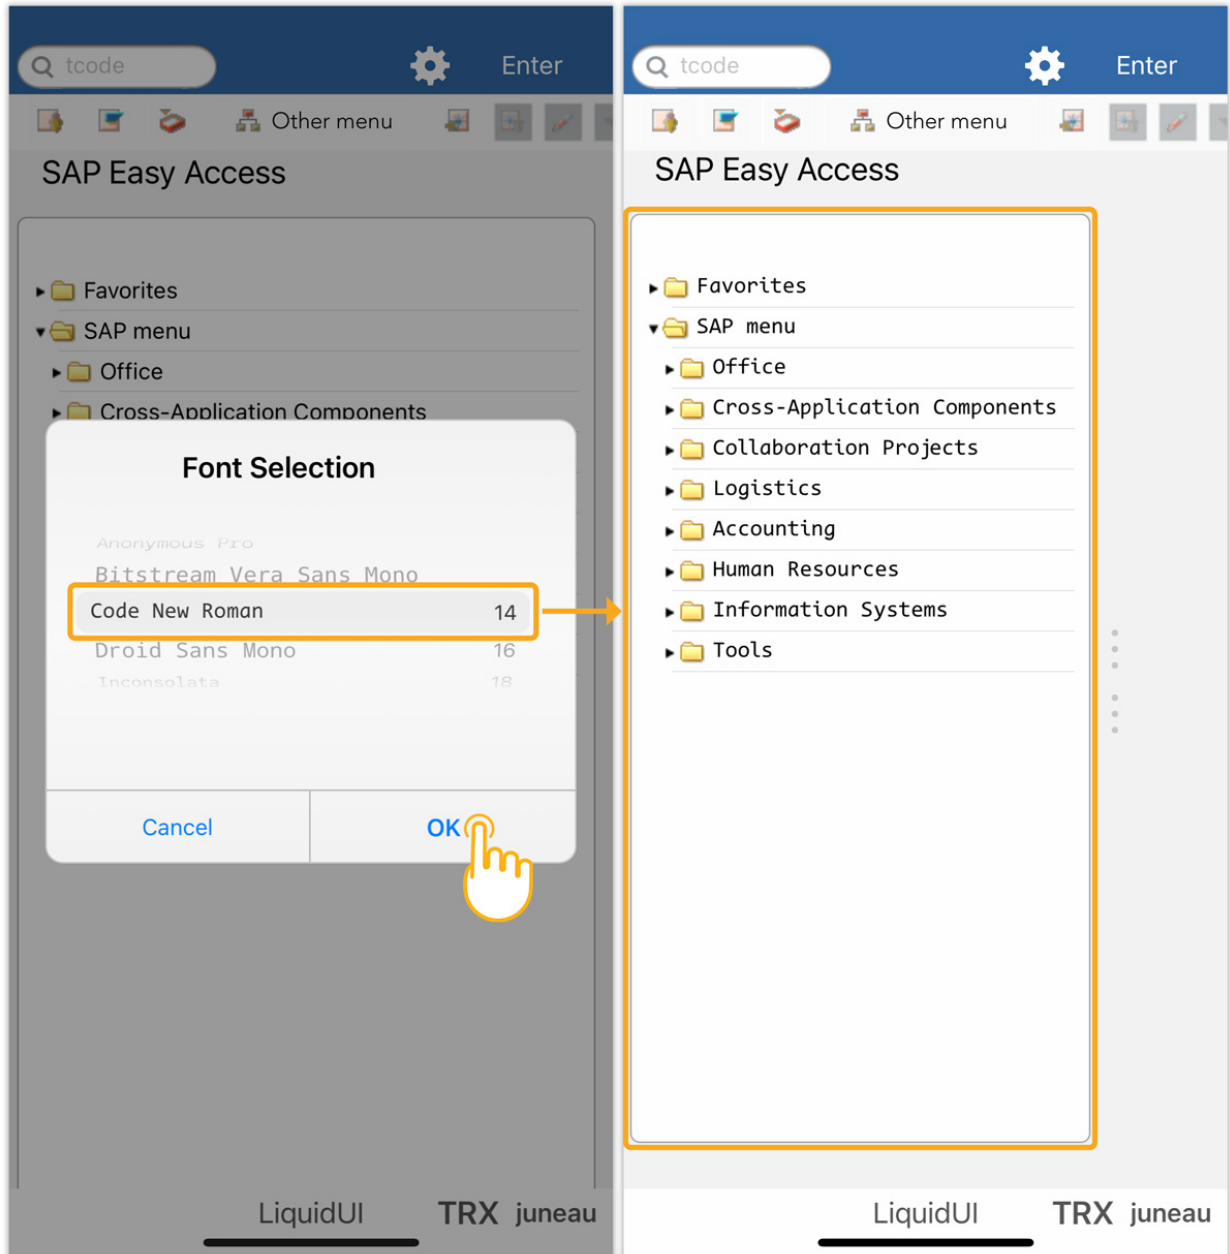

1. Log into SAP and tap on the **Server** at the screen's bottom right corner. Selecting the **Font Selection** option displays a popup with different fonts and sizes.

iOS Introduction

2. Scroll through the various font styles, select the desired monospace style and size, then click **OK**. You will see that the font style chosen **Code New Roman** is applied.

iOS Introduction

Note: You can change the font size between 14 and 48.
