

Scanguns Use Cases

5.1.2 Connecting to SAP through Liquid UI Server on Scanguns

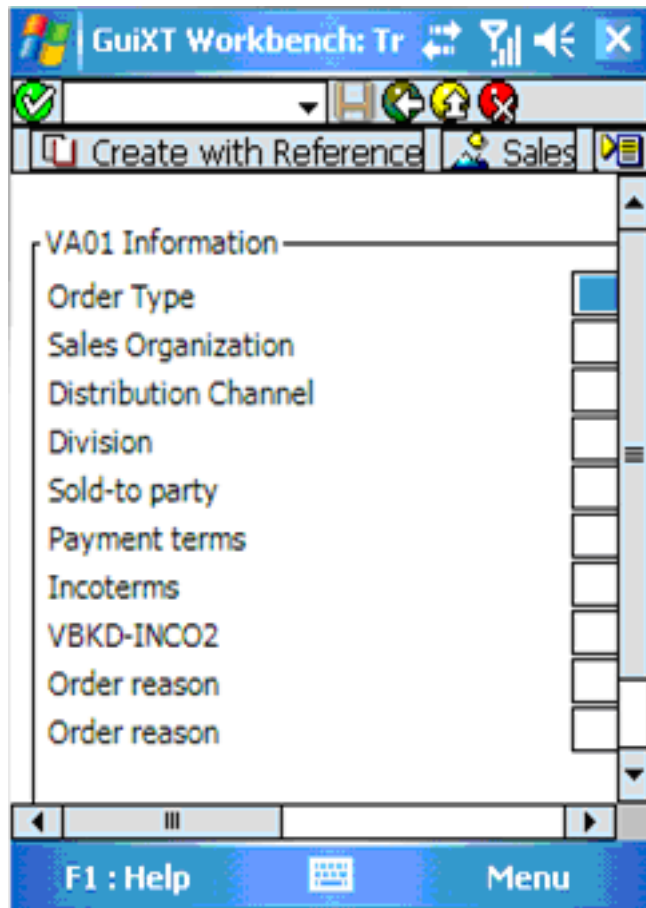

In this section, we will demonstrate a sample use case using the Mobile client and a Liquid UI Server. In this example, we can apply Liquid UI screen customizations by means of the scripts housed on the Server. In the SAP Navigation screen, type a transaction into the command box. In our example, we will use the tcode 'VA01'.

1. Launch Mobile and type /nva01 in the transaction field as shown below.

2. The VA01 initial screen will display as in the following example.

Scanguns Use Cases

3. Enter some values into the VA01 screen and press Enter. In our example, we will enter the order type.
